HG deep cleaner for leather

HG "deep cleaner for leather" is a completely safe water-based cleaner that is highly suitable for cleaning full aniline and all coloured leather (i.e. furniture, suitcases, handbags etc). It cleans deep into the pores of the leather and provides a base for subsequent treatment of HG "4 in 1 for leather".

Directions for use:

Dampen a clean cloth with HG "deep cleaner for leather" and wipe over the surface with gentle circular movements without exerting any pressure. Allow HG "deep cleaner for leather" to work into stains for 10-30 seconds before wiping off any loosened dirt with a clean cloth. When cleaning a large surface, regularly change the cloth so that no dirt is rubbed back into the leather. When the leather has dried (after approx. 30 minutes) it can be treated with HG "4 in 1 for leather".

Attention: Transport and store the bottle upright.

Do not use on 'open' leather, such as suede and nubuck, or on leather where the top layer is entirely worn. If in doubt, test on an

inconspicuous area beforehand: do not use if the test area treated remains a dark colour after it is completely dry (approx. 30 mins). On stubborn or dried stains (such as ballpoint ink, felt tip pen, nail varnish etc) it may be necessary to first use a solvent (such as acetone). Solvents will in most cases affect the top layer of the leather so it is recommended to remove stains as quickly as possible. Use HG "4 in 1 for leather" or HG "water, oil, grease and dirt repellent for leather" to help prevent future staining. Keep in a frostfree area. • Medical personnel can request the data sheet via +31 (0)36 54 94 777 • The consumer's information sheet can be obtained via www.HG.eu
