coffee machine descaler

based on citric acid

500 ml e

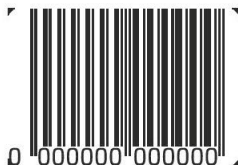

HG coffee machine descaler

- based on citric acid
- fast and safe
- for 6x scale removal

HG coffee machine descaler has been developed especially for removing scale from different types of espresso and pod-coffee machines. *HG coffee machine descaler* works safely and quickly; it is odour-free and fully biodegradable. With regular use of *HG coffee machine descaler*, the coffee continues to taste good, the machine retains its speed, and you extend the life of your espresso or pod-coffee machine!

Directions for use: Pour 75 ml *HG coffee machine descaler* in the water reservoir and fill it up to 750 ml water (10x diluted). Leave this solution to work for 10 minutes. Then turn the machine on and let half of the liquid run through. Switch the machine off, leave the product to work for 10 minutes, and then let the rest of the liquid run through until the reservoir is completely empty. Rinse the water reservoir properly after the treatment, fill it with clean tap water and then use the machine at least 3 times just with water to ensure no scale or unwanted tastes remains. If you have a pod-coffee machine, put a pod holder with a used coffee pod in the machine to collect possible scale. This prevents any blockages in the outflow. If not all scale was removed, repeat the treatment. For descaling normal coffee makers, kettles, and washing machines, we recommend *HG descaler* for appliances.

Use: 75 ml per treatment. 1 bottle is enough for approx. 6 treatments.
